

Bay Dynamics' Risk Fabric Integration with Skyhigh Networks' Cloud Usage Analytics

Key benefits of the integration

- Actionable cyber risk insights through correlation of relevant data for organizations using cloud-based services
- Contextual awareness into insider threats, compromised accounts and attacks using cloud services as an attack vector
- Effective cyber risk management across organization's complete ecosystem

Solution Overview

Bay Dynamics' Risk Fabric integrates with Skyhigh Networks' Cloud Usage Analytics to accurately detect and provide timely, actionable cyber risk insights for attacks using cloud services as an attack vector.

Bay Dynamics Risk Fabric and Skyhigh's Cloud Usage Analytics integration enables organizations to identify how their insiders – including employees and third party vendors, are using cloud-based services and remediate any risky behavior that may lead to a data breach. The technology integration helps businesses effectively manage risk and maintain a healthy cybersecurity posture while continuing to enjoy the benefits of cloud services.

Bay Dynamics' Risk Fabric Platform with its user behavior and predictive analytics approach, assembles and correlates anomalous web activity, policy data, threat intelligence and data in motion from Skyhigh's Cloud Usage Analytics along with other existing tools to provide actionable insights into cybersecurity blind spots. The unique approach allows organizations to accurately detect insider threats, compromised accounts, privileged user threats, and attacks using the cloud as a data exfiltration vector. The integration is enabled by an out-of-the-box connector that facilitates automation and centralized management.

Bay Dynamics Risk Fabric Integration with Skyhigh Networks

Risk Fabric®

A PREDICTIVE SECURITY ANALYTICS PLATFORM

Bay Dynamics Risk Fabric Platform

Bay Dynamics' Risk Fabric is a purpose-built cyber risk predictive analytics platform that assembles and correlates relevant data in a novel patented way to provide actionable visibility into cybersecurity blind spots, before it is too late.

Bay Dynamics Solutions

Risk Fabric provides actionable intelligence to Bay Dynamics' Risk Fabric Platform powers following solutions:

Insider Threat - Identify and provide prioritized list of insider threats, anomalous behavior reports and automated incident management

Outsider Threat - Identification and prioritized listing of outsider threats with malicious activity, rich correlation across perimeter activity and automated remediation

High Privilege Access - Proactive identification of high-risk users, detection of unusual user behavior, correlation and contextualization of critical assets with observed and unusual user behavior

Attack Surface Threat - Proactive identification of exploitable critical assets, correlation across compliance information, threat indicators and vulnerabilities in applications and systems

About Bay Dynamics®

Bay Dynamics® is the market leader in cyber risk predictive analytics providing actionable visibility into organizations' cybersecurity blind spots, complete with business risks and threats. The company's purpose-built Risk Fabric® platform assembles and correlates relevant data from existing tools in a novel patented way to provide actionable cyber risk insights, before it's too late. Bay Dynamics enables some of the world's largest organizations to understand the state of their cybersecurity posture, including contextual awareness of what their insiders, vendors and bad actors are doing, which is key to effective cyber risk management.

About Skyhigh Networks

Skyhigh Networks, the cloud security and enablement company, helps enterprises safely adopt cloud services while meeting their security, compliance, and governance requirements. Over 400 enterprises including Aetna, Cisco, DIRECTV, HP, and Western Union use Skyhigh to gain visibility into all cloud services in use and their associated risk; analyze cloud usage to identify security breaches, compromised accounts, and insider threats; and seamlessly enforce security policies with encryption, data loss prevention, contextual access control, and activity monitoring.
